Links to Category A and B: pages, working links	5	✔
Shopping Cart: layout, buttons, input groups…	25	✔
Responsive Design:	15	✔
Order Details (optional)	10	✔

Building a product-selling webpage solely with HTML and CSS has underscored the fundamental importance of solid structural design and visual presentation. While lacking the interactivity and dynamism of JavaScript and server-side scripting, this approach highlights the significance of meticulous layout planning and aesthetic considerations in fostering user engagement and conveying brand identity. Through this process, it becomes evident that even in the absence of advanced functionalities, thoughtful HTML and CSS implementation can still yield an intuitive and visually appealing online shopping experience, laying a strong foundation for future enhancements.
